

# Hazard Register

<b>Type</b>	ANGLE GRINDER	<b>Location</b>	
<b>Make</b>	-	<b>Sale Number</b>	1967
<b>Model</b>	-	<b>Lot Number</b>	
<b>Serial Number</b>			

ID	Hazard Type	Hazard Description
142969.1	ENTANGLEMENT.	HAIR, CLOTHING, GLOVES, JEWELLERY, TOOLS, RAGS OR OTHER MATERIALS OR BODY PARTS MAY BECOME ENTANGLED WITH MOVING PARTS OF THE PORTABLE OR HANDHELD EQUIPMENT.
142969.2	CRUSHING.	FINGERS, HANDS AND OTHER BODY PARTS CAN BE CRUSHED DUE TO THE UNCONTROLLED OR UNEXPECTED MOVEMENT OF THE PORTABLE OR HANDHELD EQUIPMENT OR THE MATERIALS; LACK OF CAPACITY TO BE STOPPED OR IMMOBILISED THE PORTABLE OR HANDHELD EQUIPMENT; COMING IN CONTACT WITH THE MOVING PARTS OF THE PORTABLE OR HANDHELD EQUIPMENT DURING OPERATION, MAINTENANCE OR CLEANING; OR BEING TRAPPED BETWEEN THE PORTABLE OR HANDHELD EQUIPMENT AND MATERIALS OR FIXED STRUCTURES.
142969.3	CUTTING, STABBING OR PUNCHING	FINGERS, HANDS, ARMS, LEGS AND OTHER BODY PARTS CAN BE CUT, STABBED OR PUNCHED DUE TO COMING IN CONTACT WITH SHARP OR FLYING OBJECTS; COMING IN CONTACT WITH MOVING PARTS OF THE PORTABLE OR HANDHELD EQUIPMENT DURING OPERATION, MAINTENANCE, CLEANING AND REPAIR; THE PORTABLE OR HANDHELD EQUIPMENT, BLADES, WHEELS, BITS AND PARTS OF THE PORTABLE OR HANDHELD EQUIPMENT OR WORK PIECES DISINTEGRATING AND BEING EJECTED; AND THE UNCONTROLLED OR UNEXPECTED MOVEMENT OF THE PORTABLE OR HANDHELD EQUIPMENT.
142969.4	SHEARING.	FINGERS, HANDS AND OTHER BODY PARTS CAN BE SHEARED BETWEEN TWO PARTS OF THE PORTABLE OR HANDHELD EQUIPMENT, OR BETWEEN A PART OF THE PORTABLE OR HANDHELD EQUIPMENT AND A WORK PIECE OR STRUCTURE.
142969.5	FRICTION & ABRASION	HANDS, FINGERS AND OTHER BODY PARTS CAN BE BURNT DUE TO CONTACT WITH MOVING PARTS OR SURFACES OF THE PORTABLE OR HANDHELD EQUIPMENT.
142969.6	STRIKING.	THE OPERATOR AND/OR BYSTANDERS MAY BE STRUCK BY MATERIALS HANDLED BY THE PORTABLE OR HANDHELD EQUIPMENT; THE PORTABLE OR HANDHELD EQUIPMENT, BLADES, WHEELS, BITS AND PARTS OF THE PORTABLE OR HANDHELD EQUIPMENT OR WORK PIECES DISINTEGRATING; AND WORK PIECES BEING EJECTED.
142969.8	SLIP TRIP FALL	OPERATORS AND BYSTANDERS IN THE VICINITY OF THE PORTABLE OR HANDHELD EQUIPMENT CAN SLIP, TRIP AND/OR FALL DUE TO POOR HOUSEKEEPING INCLUDING SWARF IN THE VICINITY OF THE PORTABLE OR HANDHELD EQUIPMENT AND SPILLAGES NOT BEING CLEANED UP; AND OBSTACLES BEING PLACED OR STORED IN THE VICINITY OF THE PORTABLE OR HANDHELD EQUIPMENT.
142969.9	ELECTRICAL.	OPERATORS, BYSTANDERS AND MAINTENANCE PERSONNEL CAN BE INJURED BY ELECTRICAL SHOCK OR BURNT DUE TO THE OVERLOAD OF ELECTRICAL CIRCUITS; DAMAGED OR POORLY MAINTAINED ELECTRICAL EQUIPMENT, CABLES AND LEADS;

# Hazard Register

---

		DAMAGED ELECTRICAL SWITCHES, SOCKETS AND CONTROLS; WATER NEAR ELECTRICAL EQUIPMENT; AND LACK OF ISOLATION PROCEDURES.
142969.10	HIGH TEMPERATURE	PEOPLE MAY BE BURNT BY COMING INTO CONTACT WITH OBJECTS OR PARTS OF THE PORTABLE OR HANDHELD EQUIPMENT AT HIGH TEMPERATURES.
142969.12	NOISE.	OPERATORS AND BYSTANDERS CAN BE INJURED OR SUFFER ILL-HEALTH FROM EXPOSURE TO NOISE LEVELS GREATER THAN 85db(A) CONTINUES OVER 8 HOURS OR 140db(C) PEAK, THROUGH THE OPERATION OF THIS PLANT.
142969.16	PLANT OPERATION.	THE PORTABLE OR HANDHELD EQUIPMENT SHOULD ONLY BE OPERATED BY COMPETENT, SKILLED AND TRAINED PERSONAL. ALL OPERATOR CONTROLS SHOULD BE CLEARLY LABELLED AND FUNCTIONING CORRECTLY AND THIS PORTABLE OR HANDHELD EQUIPMENT SHOULD NOT BE OPERATED WITHOUT ALL GUARDING IN PLACE AND ALL SAFETY SYSTEMS FUNCTIONING CORRECTLY.
142969.17	MAINTENANCE.	THE PORTABLE OR HANDHELD EQUIPMENT SHOULD ONLY BE MAINTAINED BY COMPETENT AND TRAINED PERSONNEL AND ALL ENERGY SOURCES ASSOCIATED WITH THE PORTABLE OR HANDHELD EQUIPMENT (ELECTRICAL, COMPRESSED AIR, MECHANICAL, ETC.) TO BE ISOLATED AND DE ENERGISED WHILE PORTABLE OR HANDHELD EQUIPMENT IS BEING MAINTAINED. THIS PORTABLE OR HANDHELD EQUIPMENT SHOULD NOT BE PUT BACK IN SERVICE WITHOUT ALL GUARDING IN PLACE AND ALL SAFETY SYSTEMS FUNCTIONING CORRECTLY.
142969.18	CLEANING AND CLEARING	THE PORTABLE OR HANDHELD EQUIPMENT SHOULD ONLY BE CLEANED OR HAVE BLOCKAGES REMOVED ONCE IT HAS BEEN ISOLATED FROM ALL ENERGY SOURCES AND ANY STORED ENERGY HAS BEEN RELEASED.
142969.19	INFORMATION, INSTRUCTION, TRAINING & SUPERVISION	ALL OPERATORS, MAINTENANCE PERSONNEL AND PEOPLE REQUIRED TO WORK ON THE PORTABLE OR HANDHELD EQUIPMENT REQUIRE INFORMATION ON THE OPERATION AND HAZARDS OF THE PORTABLE OR HANDHELD EQUIPMENT, INSTRUCTION AND TRAINING ON HOW TO OPERATE, CLEAN AND MAINTAIN THE PORTABLE OR HANDHELD EQUIPMENT AND PERSONAL SHOULD ALWAYS BE SUPERVISED WHEN OPERATING, MAINTAINING OR REQUIRED TO WORK AROUND THE PORTABLE OR HANDHELD EQUIPMENT.

## Health and Safety Plant Safety Purchaser Information

This plant health and safety information has been prepared by Grays for the purchaser of the plant item as required by National WHS Legislation. Whilst every effort has been made to identify all of the hazards, it should be recognised that all reasonably practicable hazards have been identified given due consideration to:

- state of knowledge about the plant item
- the availability and suitability of ways to eliminate or control the hazards
- the cost of evaluating, eliminating or controlling the hazard

Consequently, if this plant item is being purchased for use at a place of work, the purchaser is reminded of their obligations to involve and consult with employees in identifying foreseeable hazards, assess their risks and to take action to eliminate or control the risks.

In order to assess the risk, it is necessary to consider for all the identified hazards, the chance (likelihood) of something happening that would impact (consequence) on health and safety at the workplace. The following guidelines are provided to assist the purchaser in consistently carrying out an assessment of risk:

Likelihood	Consequences
<ul style="list-style-type: none"><li>• Frequency and duration of exposure</li><li>• Probability of occurrence of hazard or event (including part history of incidents)</li><li>• Possibility to avoid / minimize or limit the damage, impact or harm</li><li>• Reliability and effectiveness of existing / established systems of control</li></ul>	<ul style="list-style-type: none"><li>• Assume “worst case” injury, but also competent follow-up medical and rehabilitation support</li><li>• Consider forces or energy levels, highest belt tensions, size of gears, pulleys or other entrapment points and therefore body parts likely to be injured</li><li>• Consider sharpness of entrapment points, surrounding parts likely to exacerbate injury, and any give in the entrapment point</li><li>• Consider, will entrapment continue until plant is stopped, or can an injured part travel through the entrapment area</li><li>• Are temperatures of plant, or chemicals, likely to further injure entrapped person</li></ul>

The outcome of the risk assessment will be a prioritised list of risk control strategies and actions consistent with the following ratings:

Low risk- may be considered acceptable, where the existing controls in place are seen to be effective, requiring periodic monitoring for effectiveness.

Medium risk- considered to be unacceptable and requiring additional risk controls within medium to long term.

High risk – considered to be unacceptable and requiring action within the short to medium term.

Extreme risk – unacceptable, where immediate action required.

In all of these cases employees/operators must be made aware of the risk controls in place to protect them from the hazards.
