Cust. Concern: When drive speed over 75km/hour, Alert message appear on dash "Dumping rear air suspension "

\$1,796.39

Confirmed concern, carried out short test found fault in airmatic and Roll control unit. Processed fault in Roll control unit. Followed guided test procedure. Checked hydraulic oil level, oil level is too low. Topped up oil and corrected level, okay. Performed visual inspection, no oil leak noted. Carried out bleeding of hydraulic system. Performed high pressure test as a second step, successfully completed. Carried out initial road test, noted vehicle lowering message appearing on instrument cluster. Carried out quick test and performed actuation of airmatic compressor, compressor noted okay. Inspected underneath, noted both air bellows have been recently replaced. Carried out vehicle level calibration, success. Carried out another road test, vehicle lowering message no longer appearing, but lane keep assist inoperative noted to be on instrument cluster. Carried out guided test and found memory faults. Calibrated first the reverse camera, okay. Performed software update of multifunction camera and electric steering, okay. Carried out road test, still message appears when no lines are detected not okay. Carried out short test, new fault found in steering column module and SGR radar. Recommend to first replace the steering column module, then reassess radar after replacement.

Replaced steering column module as per WIS instructions. Carried out short test and erased fault memor. Carried out road test, noted all okay, no lane keep assist malfunction appearing on instrument cluster.

Let vehicle rest, noted vehicle lowering still on the rear once standing overnight. Airmatic compressor okay, air bellows will fill upon vehicle start up. Actuating valve block, not okay, not always actuating. Recommend to first replace the valve block.

Replaced airmatic valve block as per WIS instructions. Performed level calibration, okay. Park overnight, vehicle not holding height, but noted still a slight dip in rear air bags. Raised vehicle again and sprayed all air bellows and connections, noted bubbles appearing from air intake lines into air bellows. Disconnected lines and replaced o-rings.

Let vehicle again rest and monitored overnight. All okay.
Vehicle holding full height and no error message appearing on instrument cluster.

Faults rectified.
